INSTRUCTIONS FOR USE

1. TO ENSURE AN EFFECTIVE MOLECULAR WELD

APPLY ONLY TO BLAST CLEANED SURFACES

a) Brush away loose contamination and degrease with a rag soaked in Belzona® 9111 (Cleaner/Degreaser) or any other effective cleaner which does not leave a residue e.g. methyl ethyl ketone (MEK).

b) Select an abrasive to give the necessary standard of cleanliness and a minimum depth of profile of 3 mils (75 microns).

Use only an angular abrasive.

c) Blast clean the metal surface to achieve the following standard of cleanliness:
   - ISO 8501-1 Sa 2½ very thorough blast cleaning
   - American Standard near white finish SSPC SP 10
   - Swedish Standard Sa 2½ SIS 05 5900

d) After blasting, metal surfaces should be coated before any oxidation of the surface takes place.

SALT CONTAMINATED SURFACES

Metal surfaces that have been immersed for any periods in salt solutions e.g. sea water, should be blasted to the required standard, left 24 hours to allow any ingrain salts to sweat to the surface and then washed prior to a further brush blast to remove these. This process may need to be repeated to ensure complete removal of salts. The soluble salt contamination of the prepared substrate, immediately prior to application, should be less than 20mgs/m².

WHERE BELZONA® 1311 SHOULD NOT ADHERE

Brush on a thin layer of Belzona® 9411 (Release Agent) and allow to dry for 15-20 minutes before proceeding to step 2.

2. COMBINING THE REACTIVE COMPONENTS

Transfer the entire contents of the Base and Solidifier modules on to the Belzona® Working Surface.

Mix thoroughly together to achieve a uniform material free of any streakiness.

1. MIXING AT LOW TEMPERATURES

To ease mixing when the material temperature is below 41°F (5°C), warm the Base and Solidifier modules until the contents attain a temperature of 68-77°F (20-25°C).

2. WORKING LIFE

From the commencement of mixing, Belzona® 1311 must be used within the times shown below.

<table>
<thead>
<tr>
<th>Temperature</th>
<th>41°F (5°C)</th>
<th>59°F (15°C)</th>
<th>77°F (25°C)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use all material within</td>
<td>35 min.</td>
<td>25 min.</td>
<td>15 min.</td>
</tr>
</tbody>
</table>

3. MIXING SMALL QUANTITIES

For mixing small quantities of Belzona® 1311 use:

- 3 parts Base to 1 part Solidifier by volume
- 5 parts Base to 1 part Solidifier by weight

4. VOLUME CAPACITY OF MIXED BELZONA® 1311

25.3 cu.in. (415 cm³) per kg.
3. APPLYING BELZONA® 1311

FOR BEST RESULTS
Do not apply when:

i) The temperature is below 41°F (5°C) or the relative humidity is above 90%.
ii) Rain, snow, fog or mist is present.
iii) There is moisture on the metal surface or is likely to be deposited by subsequent condensation.
iv) The working environment is likely to be contaminated by oil/grease from adjacent equipment or smoke from kerosene heaters or tobacco smoking.

a) Apply the Belzona® 1311 directly on to the prepared surface with the plastic applicator or spatula provided.
b) Press down firmly to fill all cracks, remove entrapped air, and ensure maximum contact with the surface.
c) Contour the Belzona® 1311 to the correct profile with the plastic applicator.

CLEANING
Mixing tools should be cleaned immediately after use with Belzona® 9111 or any other effective solvent e.g. Methyl ethyl ketone (MEK). Application tools should be cleaned using a suitable solvent such as Belzona® 9121, MEK, acetone or cellulose thinners.

4. COMPLETION OF THE MOLECULAR REACTION

Allow Belzona® 1311 to solidify as below subjecting it to the conditions indicated.

<table>
<thead>

<td>¾ hour</td>
<td>1 hour</td>
<td>16 hours</td>
<td>1 day</td>
</tr>
</tbody>
</table>

These times are for a thickness of approximately 0.25 inch (6 mm); they will be reduced for thicker sections and extended for thinner sections.

5. MACHINING OF SOLIDIFIED BELZONA® 1311

Belzona® 1311 is extremely difficult to machine down by turning, using conventional or carbide tipped tools. However, it can be machined using diamond tipped tool.

Alternatively it can be machined by grinding, but this should be carried out as soon as possible after the Solidified times shown.

6. APPLICATION OF A FURTHER LAYER OF BELZONA® 1311

Where this is required it should be applied as soon as possible after application of the first layer and certainly while the first layer is still soft.

If the Belzona® 1311 is no longer soft the surface must be roughened by abrading or flash blasting before applying further Belzona® 1311.

HEALTH & SAFETY INFORMATION

Please read and make sure you understand the relevant Safety Data Sheets.

The technical data contained herein is based on the results of long term tests carried out in our laboratories and to the best of our knowledge is true and accurate on the date of publication.
